

Bondable Compensation Resistors

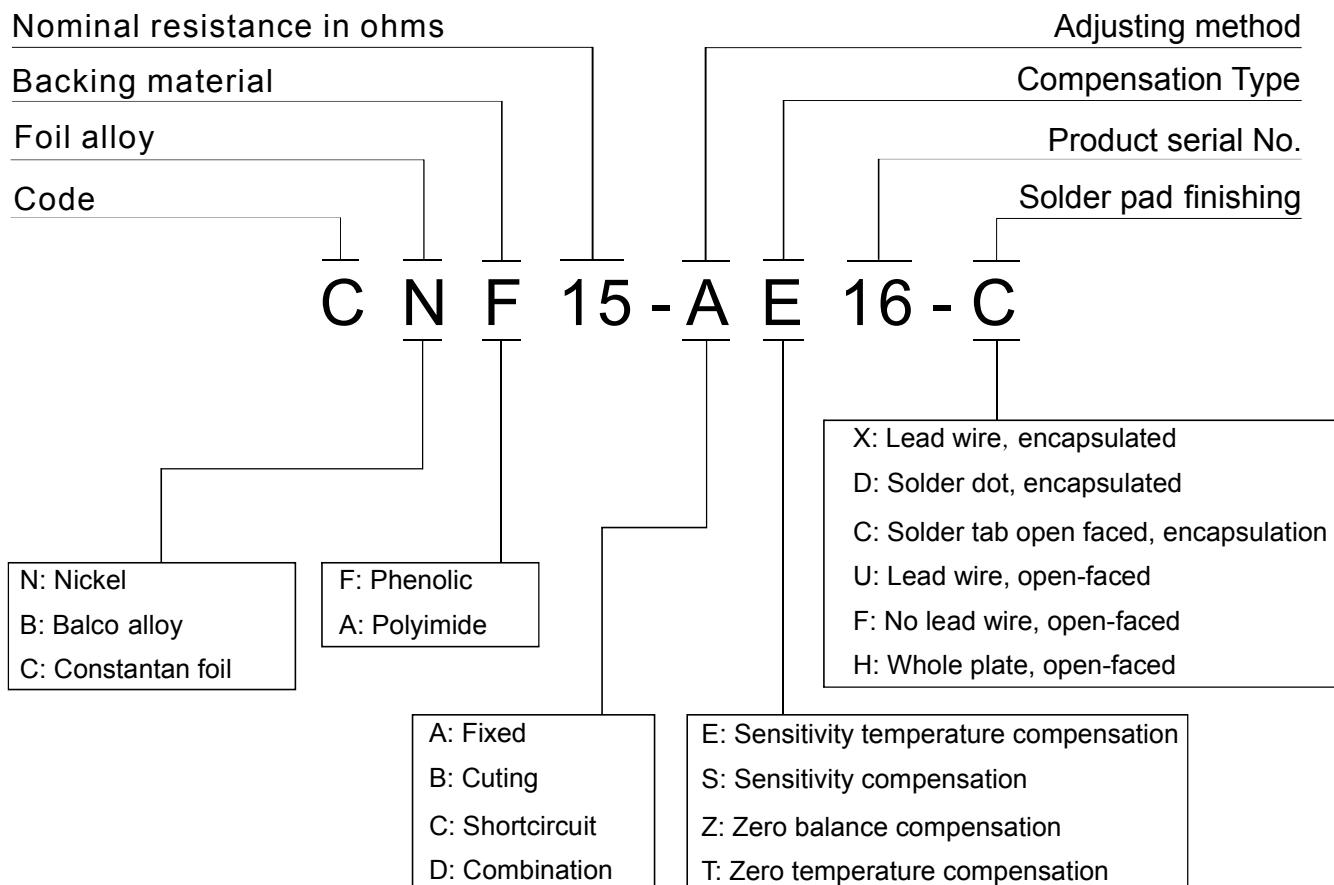

Introduction

High accuracy transducers not only need to choose high accuracy strain gauge but also need to proceed with series compensation and adjustment. Proza's C series bondable compensation resistor is one kind of bonded adjustable compensation resistor.

The compensation resistors are made from a number of metal foils versus backing materials. By using these resistors to improve transducer's technical parameters like output sensitivity, temperature changes of sensitivity, zero output, and temperature coefficient on zero etc. R series resistors are featured with easy bonding, convenient adjustment, having same temperature performance with spring element, as well as higher compensation precision.

Specifications

| Specifications | CNF series | CBF series | CCF series |
|--|--------------------------|-------------------------|---------------|
| Tolerance of average resistance value (23°C) | | ≤ ±0.5% | |
| Temperature coefficient of resistance | 5.5x10 ³ /°C | 4.3x10 ³ /°C | not available |
| Operating temperature range (°C) | | -30 ~ +60 | |
| Adhesive | P-600, P-610, P-602, 502 | | |
| Solder pad finishing | X,D,C,U,F,H | | |
